

# FS200

## DI WATER GENERATOR

# DATASHEET

*The latest generation machines for your water purification requirements.*

Introducing the FS200.

This is a compact system with an integral tank that stores the water it produces. It uses the input water pressure to produce the deionised water. It is brilliant for a plug and play approach.

Once the generator has filled, it uses its automatic shut off feature to ensure that each morning you will have a full tank ready to use throughout the day.

## FLUID SCIENCE **FS200** DI WATER GENERATOR

The FS200 reverse osmosis system is part of the latest generation of water purifying equipment. The system is built from a high-impact polypropylene, with quality components fitted throughout.

This system uses particle filtration, then reverse osmosis, and finally the water passes through a mixed bed deionising resin stage. Water is consistently produced at a purity level of <1.3 microsiemens.

### Technical Specification

<ul style="list-style-type: none"> <li>- Production Rate: up to 2L per minute.</li> <li>- Suitable for up to 120L per hour.</li> <li>- Storage volume of up to 200L.</li> <li>- Minimum of 40psi input water feed pressure required (50+ psi recommended)</li> </ul>			
- Storage Volume:	<b>200L</b>	- Polishing Vessels:	<b>1</b>
- Fill Time:	<b>Under 2 hours (50PSI)</b>	- Pre Filters:	<b>1</b>
- Empty Weight:	<b>58kg</b>	- RO Membranes:	<b>1</b>
- Full Weight:	<b>258kg</b>	- RO Housing:	<b>Stainless Steel</b>
- Dimensions:	<b>62x85x82cm</b>	- Auto shut off when full	
- Delivery Pumps:	<b>1</b>
